LESONAL PLASTIC SURFACE CLEANER

DESCRIPTION: Lesonal Plastic Surface Cleaner has been specially developed for the cleaning of raw plastic and fiberglass parts while removing the static charge.

Product: Lesonal Plastic Surface Cleaner

BEFORE YOU CLEAN:

The purpose of cleaning and degreasing is to remove residual grease, oil, wax, silicones, road dirt and sand, etc. If this is omitted, then residual dirt will migrate into the fine scratches left during the sanding process. Possible silicone fish eyes and adhesion of the paint system subsequently applied to the contaminated surface will be poor and the finish may blister or delaminate in a very short time.

1. Always wash the car thoroughly to remove as much contamination as possible and to eliminate as much dust and dirt as possible.
2. Always wear gloves when degreasing. This will accomplish two things:
   a) Reduce the risk of solvent being absorbed into your hands.
   b) Prevent salts and oils on your hands from contaminating the surface to be refinished.

APPLICATION:

Lesonal Plastic Surface Cleaner is not only an aggressive cleaner for plastic and fiberglass parts, but is also a special cleaner for cleaning bare metal. Lesonal Plastic Surface Cleaner also removes the static charge from raw plastic parts and fiberglass. This product is too aggressive for lacquers but can be used on non-reversible existing finishes. Always check the reversibility of the substrate before degreasing with this product.

CLEANING TECHNIQUE:

When a repair is to be made or a finish is to be recoated, the first thing to do after washing the car is to clean the body panel under treatment. Wet a clean cloth with Lesonal Plastic Surface Cleaner and clean/degrease the surface under treatment. Immediately thereafter, wipe the surface dry with clean, dry cloths. Always use two cloths, as one cloth will merely shift rather than remove dirt and grease.

NOTE:

Replace cloths being used for degreasing and cleaning regularly by clean ones. Always place used degreasing rags in a sealed container that meets local requirements to avoid the risk of a spontaneous combustion fire.
LESONAL PLASTIC SURFACE CLEANER

UNTREATED PLASTIC PARTS:

1. Water
   Wash down the unpainted plastic part with warm water and detergent.

2. Lesonal Plastic Surface Cleaner
   Wash down plastic part with Lesonal Plastic Surface Cleaner. The stronger solvent in Lesonal Plastic Surface Cleaner removes mold release agents.

3. With a clean towel, dry off the Lesonal Plastic Surface Cleaner before it has time to evaporate. After this treatment, the surface is also rendered anti-static.

4. 20–30 minutes
   When cleaning unpainted plastic parts, allow the part to dry out for 20 to 30 minutes after the application of cleaner and before the application of a primer.

NOTE:
The use of Autoclean Surface Cleaner must replace Lesonal Plastic Surface Cleaner in areas where the use of low VOC products is mandated.
Lesonal Plastic Surface Cleaner can also be used on stable painted plastic parts. Follow the same procedure for unpainted plastic parts.

BARE METAL:

Steel, zinc coated steel and aluminum should be degreased as follows:

1. Lesonal Plastic Surface Cleaner
   Wash down the metal with Lesonal Plastic Surface Cleaner. This will ensure that the stubborn contaminants will be removed during final degreasing and cleaning.

2. With a clean towel, dry off the degreaser and cleaner before it has time to evaporate.
   —Always use one fresh towel for washing down and one fresh dry towel for wiping dry.
   —Replace towels regularly.

NOTE:
With all cleaning and degreasing activities: once the vehicle has been cleaned, it must never be touched with the bare hand; as salts, moisture and oils can be transferred to the prepared surface which may result in adhesion or blistering problems. It is particularly important that hand protecting barrier creams are never used near an automobile that is to be refinished.
SPECIAL INSTRUCTION FOR CLEANING TRUCK BODY CONSTRUCTIONS:

It is important to prevent dirt residues from getting into construction joints of vans, trucks, etc. during cleaning and degreasing. Disregarding proper cleaning of these areas may cause application and/or adhesion problems when the paint is applied. Vertical panels should, therefore, first be cleaned and degreased from the bottom upwards and subsequently from the top downwards.

CLEANING AND CONDENSATION ON METAL SURFACES:

After a surface has been cleaned and degreased, the solvent will evaporate. The heat needed for evaporation is withdrawn from that surface, making it colder than the surrounding atmosphere, which results in (often not visible) condensation on the surface. Allow the moisture sufficient time to evaporate. The first coat of paint can be applied as soon as the surface has regained the temperature of the surrounding atmosphere. Earlier application of product may lead to adhesion problems.

The same problem may arise if a vehicle is transferred from a cold room to a warm one, or from outdoors to indoors. Allow vehicles a minimum of one hour to acclimatize. Double-walled vehicles (and certainly insulated ones) require some hours to acclimatize.

STOCK KEEPING:

<table>
<thead>
<tr>
<th>CONTAINER SIZE:</th>
<th>Lesonal Plastic Surface Cleaner: 1 gallon (3.785 lt)</th>
</tr>
</thead>
<tbody>
<tr>
<td>SHELF LIFE:</td>
<td>Two years if stored in original container at room temperature</td>
</tr>
</tbody>
</table>

SAFETY ASPECTS:

<table>
